Read more About us The need for flexible, collaborative and effective model-based decision making tools is fast emerging in project, construction and engineering industries. Navisworks Manage is a new modelling and information management software that is designed to support effective decision making. It provides a robust data management tool for users of Navisworks Building, Navisworks Manage and Navisworks. It is a powerful means of visualising building performance and documenting project outcomes. It is also useful for improving knowledge management and for exchanging data with a variety of other applications, including model-based analysis tools. Navisworks Manage for Navisworks Manage users includes two key advantages. First, Navisworks Manage is fully integrated into Navisworks Building, ensuring the two software packages are seamlessly connected. Second, the capacity to display building data and building performance information together in a unified view provides a powerful means of identifying issues and making changes to project design, plans, and even the building itself. The new Navisworks Manage release is the culmination of research and development. It includes a number of new capabilities that are outlined below. Capability Overview The new release of Navisworks Manage includes a suite of new capabilities in modelling and data management that aim to support the creation of robust building performance models. In addition, the new release also offers the ability to use building performance data to analyse energy consumption. A key benefit of this is that it enables users to make informed decisions about the ongoing operation of the building. Users can identify any discrepancies between projected and measured building energy consumption. Additionally, the capacity to identify and flag issues can help to improve the quality of future models and help to ensure that the design, plan and construction of the building is done to an agreed standard. It also enables users to view and understand building performance information in a unified view. Users can now use the Building Performance Data View to display detailed energy consumption and performance information together with stakeholders. A key advantage of the new release of Navisworks Manage is that it enables users to take a more informed decision about the ongoing operation of the building. It also enables users to better understand the impact that design and construction changes will have on the building. The new release also enables users to analyse energy consumption and its impact on the building. This includes the ability to overlay energy consumption information with the building performance data. This provides users with a more holistic understanding of the impact that 82157476af
