Lunar Sale 50% off and small bugfix! : Lunar sale is cool, and then this game also is a bit cheaper. So that's cool and all. I've kinda let this game sit a little, because there wasn't really that much traction, so I think a new project should be the wiser choice going forward! Hope you're all doing well out there, lovelies! Last patch was just to make it easier to understand how to back away from audio settings using the keyboard. Having the back key on "T" was a bit confusing at first. So you can now go "Back" with the Backspace and Escape key as well.. Bugfix and small add-ons. 25-10-18 : First update for Whimsical Quest on Steam! This is rather fun, isn't it? Bugfixes SteamOverlay Pause Code Inserted. The game should now properly pause on steam overlay. Tweaked damage on Dark Platter, Altar of Ymbis and Spheremaster. Issues with Steam Achievements fixed. Added Sound Effect for Dark Platter when you use the item. Voices(?) for different bosses added in. Added some SFX for SpiritBlazer that were left out. Properly fixed games interaction with the mouse cursor. Leaving it out of the game but not completely unavailable if Whimsical Quest isnt active. I'm still working on adding more items and other 'quality' stuff before the official release. Main

target right now is just making sure everything works fine.. Whimsical Quest is available! : Whimsical Quest is now open to the entire public! It's even possible to buy the game. Now that's quite the traditional service! I hope you guys enjoy the game. I'll be lounging around in the discussion forums from time to time if you guys have any enquiries or things of the same sort.. Some additions : Another update with two more achievements and two more items! NEW Item: Mr. Sentry. NEW Item: Mr. Acid. NEW Achievement: Whimsical Patron. NEW Achievement: It Hurts. Fixed a glitchy item pickup on the dream world stage making you not able to progress. Balancing the character progression has been the most current project. So some tweaks to almost every character has been made. Mainly damage and attack speed ratios. Minor Dillydallying around with the code. We're closing in on a month until the release. To all the potential testers out there: any bugs or glitches (or even cool suggestions?) you find out there would be nice to collect. So post them here, or wherever you know where to get a hold of me. Like on Stealthygolem on twitter.
